Software Developer | AI & Full-Stack Engineering | LLM Systems

SUMMARY

Software developer focused on **AI-powered products, full-stack applications, and LLM systems**, with hands-on experience shipping production features across frontend, backend, databases, and AI pipelines. Strong in product iteration, debugging, performance optimization, and turning ambiguous requirements into working systems.

EXPERIENCE

Software Developer Intern / Backend Intern | [NimitAI](#) | New Delhi, India June 2026 – Present

- Built the Prep War Room from scratch, owning backend and frontend workflows for practice modules including card-pitch TTS analysis, mind maps, podcasts, cheat sheets, pitch decks, and pitch-deck analysis.
- Optimized the MVP LLM generation and research pipeline through model changes, parallel execution, pipeline improvements, and prompt optimization, reducing processing time from 317s to 117s (~63%).
- Migrated production PostgreSQL data from Supabase to Azure PostgreSQL and cleaned 20+ GB of critical production data, reducing the database footprint to ~16 GB.
- Redesigned the application dashboard and multi-page landing site, built its CMS, and resolved 50+ GitHub issues plus 100+ issues from internal bug tracking.

Software Development Intern | Lexley.ai (Zangerrr.ai) | Remote February 2025 – August 2025

- Developed AI-integrated frontend prototypes using Next.js, React, Tailwind CSS, and Gemini API for feature experimentation and conversational workflows.
- Collaborated with backend engineers to resolve 30+ issues across FastAPI, MongoDB, and PostgreSQL, improving application stability and reliability.

EDUCATION

University School of Automation and Robotics (USAR), Guru Gobind Indraprastha University | New Delhi, India

B.Tech in Artificial Intelligence and Data Science | CGPA: 8.07/10 | September 2023 – August 2027

PROJECTS

AI-Powered Notes Platform | [Notovo.in](#)

- Built and deployed an EdTech platform for automated note generation and contextual document understanding; reached #1 Google Search ranking for “Notovo” and generated 190+ notes during beta testing.
- Developed a LangGraph-based multi-agent AI workflow with streaming responses and optimized performance to 1.1s FCP and 48ms INP using Supabase.

Tech: Next.js, Supabase, LangGraph, TypeScript, Vercel, Google OAuth

AI Codebase Audit System | [Code Sage](#)

- Built an AI-powered static analysis system for vulnerability, bug, and technical-debt detection across large repositories using LangGraph multi-agent workflows and AST-driven repository indexing.
- Eliminated hallucinated code references through structural validation against real file coordinates with token-efficient deterministic chunk retrieval.

Tech: Python, LangGraph, AST Parsing, Pydantic, Gemini API

Mood-Based Travel Discovery Platform | [Voyatri.in](#)

- Built a full-stack travel discovery platform with personalized mood-based recommendations, a TikTok-style vertical feed, and curated Decks for sharing itineraries.
- Reduced image storage costs by 80%+ through browser-side compression and optimized tag-based recommendation APIs to ~50ms latency.

Tech: Next.js, React, Supabase, PostgreSQL, Tailwind CSS, Framer Motion, Vercel

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL

AI / LLM: NLP, LangChain, LangGraph, Google ADK, Gemini API

Backend / Data: Node.js, FastAPI, REST APIs, PostgreSQL, MongoDB, Redis, Supabase, Azure PostgreSQL

Frontend / DevOps: React, Next.js, Tailwind CSS, Docker, CI/CD, Git

LEADERSHIP

Web Team Lead | ACTS USAR November 2024 – January 2026

- Mentored 20+ peers in web development and DevOps through workshops and hands-on technical sessions; led technical operations for a college tech fest with 300+ participants.
